Well done. A very good study. Overall well-written article. Some suggestion for the article to more interesting: 1.

Introduction - very clear background of main issues, motivation of study. However, too long and some content are overlapping. can be precise and concise. 2. Literature review - very good and clear. 3. Methodology - Suitable methodology according to the research objective. Include how you adapt the questionnaire. 4. Findings - ok, maybe can include ROC statistic for robustness.
