

Review of: "Assessment of Learner Satisfaction in Secondary School Education"

R.A. Hidayat¹

¹ Universitas Sarjanawiyata Tamansiswa

Potential competing interests: good article

Articles written have the potential to add references in improving the quality of education, one of which is in terms of learning satisfaction. However, in collecting sample data, it is necessary to consider the method used. The background section also needs to be reinforced with concrete empirical data. The discussion is good and able to show data synthesis.
