A wonderful tool to ease the complex topic of CAM. I believe not all CAM is related to non-pharmacological interventions. People use CAM for different treatment modalities also. The tool must find suitable terms to take its stand on its usage of CAM in reference to what? Also, one of the main challenges of doing CAM research is its contextual variation. So, care should be taken to see how much the tool can be generalized and in which context. I wish the tool to go beyond cancer care and help many researchers like me ease and produce quality research.

While the topic of CAM is very complex, if the KR is taking care of defining its position in terms of its focus, it is going to be a wonderful tool. Thank you.
