Potential competing interests: No potential competing interests to declare.

While I believe this publication has potential, I recommend that the authors revise the manuscript thoroughly. My suggestions are outlined below:

1. Highlight the strengths, particularly the novelty, of your paper. Elaborate on all results with clear explanations, as the underlying reasons for the mechanisms and results remain unclear.
2. The literature review is insufficient and needs expansion.
3. Rewrite the abstract entirely, focusing on the problems, the underlying idea, and the results.
