Review of: "Predicting the Effects of Coevolution on Rubisco: A Study on Carbon Dioxide Fixation by Bryophytes"

Vineet Soni¹

1. Department of Botany, Mohan Lal Sukhadia University, India

The manuscript is reviewed, and the following are the observations:

- (1) The title of the manuscript does not match the work as mentioned in the manuscript.
- (2) The manuscript highlights RuBisCO sequences in three bryophyte taxa: liverworts, hornworts, and mosses, which are obtained from the Rubisco sequences from online protein databases. Only on the basis of in silico studies, the coevolution of the enzyme cannot be predicted.
- (3) In the title of the manuscript, 'a study on carbon dioxide fixation by bryophytes' is mentioned, but the study related to CO₂ fixation is not performed by the researchers.

Hence, the manuscript should be REJECTED.
