General comments

It was interesting reading the manuscript. However, I have some comments/suggestions:

Introduction

It is well written.

Materials and Methods

Under Student demographic characteristics, study program characteristics, the authors need to specify the categories of each of the variables. E.g. Gender (Male and Female), etc.

Results

It is well written

Discussion

The authors need to provide plausible explanations for some of their results. E.g., why single people gamble more.

Conclusion

The conclusions are based on the findings of the study.
