Potential competing interests: No potential competing interests to declare.

The authors established some fixed point results for contractive type mappings in cone metric spaces. Examples are provided to support results and concepts presented herein. As an application of our results, we deduce other established fixed point theorems in cone metric spaces.

After review, I think that this is a well-written paper.

I read the paper, and now the author has updated and uploaded the new version. The author added the definition of cone metric space and also improved the latest version.
