The manuscript entitled: "Assessment of soil erosion in the Cesar watershed, an initial step toward the restoration of the Cesar River" is an interesting and timely topic considering the urgency of environment protection and restoration in every corner of the world.

Having said that, here are some comments for further improvement of the manuscript:

1. Ensure better idea flow and fix some write-up and grammatical errors throughout it,
2. Revise Abstract section and add main results in it,
3. Add possible restoration measures in line with the situation of the identified hot spots, and
4. Make the Conclusion section more clear.
