Potential competing interests: No potential competing interests to declare.

1. Title of the paper is not suitable. In fact, the paper solves stiff problems. It's better to write this kind of ODEs in the title.
2. The most important problem is its write-up, especially in notations.
3. Apparently, the method is complicated. The CPU time of the method must be compared with methods [28-30]. The errors of methods in those papers are acceptable and small. Hence, their CPU times must be compared.
4. Acronym 7D2PIB is not suitable.
