

Review of: "Valorization of palm oil wastes into oyster mushrooms (Pleurotus HK-37) and biogas production"

Maryam Rostaei

Potential competing interests: No potential competing interests to declare.

The manuscript is well written and well structured.

However, I have several comments regarding the content.

In the abstract for abbreviations, use the full name for the first time.

I suggest that authors represent the p-values as $p < 0.05$ significant levels.

The introduction is too long. Please shorten it.

Some of the references were too old, please replace the most recent references.

Please check data again.

Please check references correctly. In some references such as Mshandete and Cuff, 2008, did not present name of journal.
