Dear authors,

the paper is overall of average quality, it is well written, even if it is not reporting a very novel scientific result. It rather reports about the application of a well known model to compute the erosion rate at the basin-scale with reference to a specific case study.

Despite all this, the paper may be still considered for publication, but it needs to be revised.

The authors may check all my specific comments in the attached revised version of the manuscript.

Hope this helps.

Kind regards
