

Review of: "A Cointegrated Multi-Factor Semi-Log Regression Approach to Quarantine the Impact of Microfinance on Poverty Regionally"

Lydie Myriam Amelot

Potential competing interests: No potential competing interests to declare.

This is an enriching paper based on the impact of microfinance on poverty, taking into consideration the aspect of COVID-19. The methodology was appropriate, and the conceptual framework was well defined. However, the author should have designed and explained the four econometrics models in the RM. Conversely, the estimates were well explicit and interpreted. Meanwhile, more references should be provided. The conclusion and recommendation are appropriate but should be categorized in terms of limitations of the study and areas for study so that the presentation of the study can be more technical. Grammatical errors identified should be reviewed as well. The paper can be accepted but should be revised on the mentioned grounds.
