Trypsin/Chymotrypsin Protein Cleavage Reagent

National Cancer Institute

Source

National Cancer Institute. *Trypsin/Chymotrypsin Protein Cleavage Reagent*. NCI Thesaurus. Code C161892.

A protein cleavage reagent comprised of a mixture of trypsin and chymotrypsin that cleaves proteins into peptides at the C-terminal side of a phenylalanine, tyrosine, tryptophan, leucine, lysine or arginine residue unless that residue is followed by a proline.
