X-linked intellectual disability-ataxia-apraxia syndrome

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. X-linked intellectual disability-ataxia-apraxia syndrome. ORPHA:85338*

X-linked intellectual disability-ataxia-apraxia syndrome is characterised by ataxia, apraxia, intellectual deficit and/or seizures. It has been described in nine males in two unrelated Danish families. It is transmitted as an X-linked recessive syndrome with partial clinical expression in obligate female carriers.
