The article "Analyzing the nexus between Spatial Data Infrastructure Development and e-Government" presents an interesting research topic, with high interdisciplinarity and great relevance today. Furthermore, the article adheres to the scope of Qeios, exploring aspects of spatial data infrastructures for e-government services.

Below we highlight aspects that we believe can be improved in the article. We recommend that, as far as possible, they are considered in the writing of the final version of the article.

- In the abstract, authors need to make the objective of the work clearer, as well as their scientific contributions.

- Use a greater number of references to support the text in the introduction, as well as in the theoretical foundation.

- Present a brief description of the concepts that will be covered in the introduction to make it easier to understand the contrition of the work.

- Authors need to make the objective of the work clearer, as well as their scientific contributions in the introduction.

- Present a greater number of references in the theoretical foundation to present the concepts involved in the work.

- I believe that the authors should delve a little deeper into the concepts of the theoretical framework in 2.1 and 2.2

- I believe that authors should present a Related Works section, adding a brief presentation of how the works were found and what protocols they followed to identify related works

- Add a methodology section to describe the step by step that was done for the study

- Present a results section to present and discuss the effects and contributions of the study

- Present a Conclusion section to present the main contributions and conclusions regarding the work developed, as well as a comparison with the works presented in the literature.

- Restructure the text in order to specify the methodology developed, the results found and the main conclusions of the

work.

Below are some suggestions to help the text be better formatted and/or understood by readers:

- We suggest that authors review and rewrite the text as there are problems with hyphenation, grammar, spelling and agreement.
