Potential competing interests: No potential competing interests to declare.

This research attempts to study the attitudes and perceptions of students who took a statistical literacy course at a university in an African country. A detailed analysis has been reported in this paper, which gives a clear understanding of the results obtained. The 7-point Likert scale used in this survey is to know how the respondents responded to each of the items. It is good if the author can explain why the 7-point Likert scale is chosen for collecting the responses, with supporting articles.

Figures and Tables

All the figures and tables are labelled accordingly and have clear explanations to ensure the readers can understand the results discussed.

Conclusion and Recommendation

The author clearly stated in the paper the conclusions obtained and the next steps for the next research.

References

The author referred to sufficient and latest references in this paper.
