The article is of excellent quality. It addresses a very important topic for the scientific community. The small points I suggest improving are:

- Present an international overview of the theme in the introduction (what was done similarly in other countries, or even what was not done);
- Improve the practical implications of the study (How important is the study for society? How important is the study for professionals? How important is the study for the health system? Etc.).
- I suggest reading the studies cited below, as I believe they can contribute to the introduction and/or discussion of the article and can be cited: COELHO, Kelley Cristina et al. Prevalence of urinary incontinence and associated factors in CrossFit practitioners: A cross-sectional study in Brazil. **Pelviperrineology**, v. 41, n. 2, 2022.
