General comment on Assessment of soil erosion in the Cesar watershed, an initial step toward the restoration of the Cesar River.

1. The Title of the article is not understandable and easily captured. So I recommended that is better to modify the title of the article.
2. The abstract may not include the conclusion and results. So author should be incorporating the finding in the abstract, in quantitative way.
3. In the map of the study area, the legend of the each items are not visible, so please put your legend clearly, the colors you provide for each biomass should be differ.
4. The source of the data was not mentioned, please cite the source.
5. The table format is not good, please use scientific table format.
6. The source of the equations should be justified kindly, if they are not developed by the author.
7. And also denoted the equation like equation1,2,3...
8. Reference: Re-check the whole reference list just to make sure you have added all the references that you cited in your manuscript.
9. Apart from this the quality of the overall paper is good.
