# Hair defect-photosensitivity-intellectual disability syndrome

INSERM

## Source

*INSERM. (1999). Orphanet: an online rare disease and orphan drug data base. Hair defect-photosensitivity-intellectual disability syndrome. ORPHA:1408*

Calderon-Gonzalez-Cantu syndrome is characterized by the association of stubby, coarse, sparse and fragile hair, eyebrows and eyelashes with photosensitivity and nonprogressive intellectual deficit without a demonstrable metabolic aberration.
