

Review of: "Mumps pneumonia in adults – a forgotten entity"

Luca Coppeta

Potential competing interests: No potential competing interests to declare.

This is a very interesting paper. Mumps infection is a big issue for global health, even if there are a mandatory vaccination policies for MMR (Measles-Mumps-Rubella) in different countries. Subject vaccinated in childhood can be infected by mumps virus. It's necessary to evaluate immunization status in adolescents, particularly in high risk population like HCWs (healthcare workers) and medical students. The author should deep discuss this topic, for example reading these published papers:

- Ferrari C, Trabucco Aurilio M et Al. Evaluation of Immunity for Mumps among Vaccinated Medical Students. *Vaccines* (Basel). 2021 Jun 4;9(6):599. doi: 10.3390/vaccines9060599. PMID: 34199971; PMCID: PMC8226533.
- Fedeli U., Zanetti C., Saia B. Susceptibility of healthcare workers to measles, mumps rubella and varicella. *J. Hosp. Infect.* 2002;51:133–135. doi: 10.1053/jhin.2002.1222.
