**Potential competing interests:** No potential competing interests to declare.

This is very interesting paper in a sense that it is unique as not many researchers have explored this issue.

However, I have some suggestions and questions to help improve the paper.

1. Rephrase line 10 in the introduction section because it is not clear what is meant.
2. explain what TET funding where it is first mentioned i.e. under the introduction
3. Delete the word "and" in line 6 under the literature review section
4. Substantiate the first line of the 3rd paragraph (in the literature review) with evidence. Also provide a few examples of the developing countries you referred to.
5. The in-text citation is not consistent. It is therefore not clear as to which reference style is used.
6. supporting evidence should be provided in the 2nd paragraph under the section "maintenance cycle". specifically the last three sentences.
7. For a clear argument, specify the stakeholders and users whose opinions need to be sought in the 2nd last paragraph of the literature review.
8. what is the theoretical framework guiding this study?
9. what was the populations size from which the sample is taken?
10. what type of sampling was used and why?
11. The discussion section should be tied to the literature
12. The paper should end with a conclusion.

Given the above, I am of the opinion that the paper requires major revision before it can be accepted for publication.
