Mendelian susceptibility to mycobacterial diseases due to partial IRF8 deficiency

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Mendelian susceptibility to mycobacterial diseases due to partial IRF8 deficiency. ORPHA:319600*

Mendelian susceptibility to mycobacterial diseases (MSMD) due to partial IRF8 (interferon regulatory factor 8) deficiency is a rare genetic variant of MSMD (see this term) characterized by a selective susceptibility to relatively mild infections with bacillus Calmette-Guérin (BCG)..
