Potential competing interests: No potential competing interests to declare.

In this paper, the authors presented an analysis of security concepts within a smart city to improve security based on different strategies, and analyzed various case studies, several cities in India and other world cities, for which it is not clear why they were chosen.

In the summary, the goal is not highlighted or the methodology used in the work is not clear, although it is shown in detail with a picture. Many steps were not found in the work. In the introduction, a hypothesis should be highlighted, and it should be expanded with an interesting state of the field that emerges from a series of literature. The used literature must be cited in the text.

The conclusion should be more specific, comprehensive and focused on the content of the paper.
