The paper titled: "[A memory dependent analysis on permeation of non-Gaussian laser pulse through human skin](#)" is an interesting and informative work which can be **considered for publication with no hesitation**. However I suggest for author a little bit to do:

1. provide reference for non-dimensional transformations described in your article.
2. reference for boundary conditions should also be given
3. A thorough proof reading by author is required because few grammatical and typo errors need to be corrected.
