# Glyclopyramide

National Cancer Institute

## Source

National Cancer Institute. *Glyclopyramide*. NCI Thesaurus. Code C65808.

A second-generation sulfonylurea with antihyperglycemic activity. Compared to first-generation compounds and like other second-generation compounds, glyclopyramide works more effectively with fewer side effects. This agent has a relatively short half-life of 4.0 hours and is excreted mainly by the kidneys.
