**Potential competing interests:** No potential competing interests to declare.

The topic of the manuscript is really interesting and relevant. The researcher has put a meticulous effort in developing the keyword cluster and trend of research in the field of CSR. However, the research work would be better if the researcher could identify the research gap and suggest some future research topics, which would provide more value addition to the paper. It is also essential to explain the background of the study- which provide more clarity on why this study has been undertaken.
