Dear Editor,

The work done is noteworthy. The experiments are described well and the procedures are well explained. But the experimental design is of basic level and it could be improved significantly with more experimental work.

The description of results and discussion is somehow not very attractive though the authors have tried well. The discussion should be re-written with little modification so that one can go in a flow while reading the article.

As a whole, I would suggest to accept the paper after minor revisions as discussed above.
