Potential competing interests: No potential competing interests to declare.

The article is well written and organized.

However, the authors must highlight the main contributions in the field of Quadcopter modeling, specifically for Precision Agriculture. What distinguishes the proposed Quadcopter from other models described in the literature? What specific needs in the field of smart/precision agriculture does the proposed model respond to? What innovative features does the proposed model present?

Section 3. Results and Discussion is very poor and definitely needs to be improved.

The conditions tested to evaluate the model must be detailed.

Which control strategies were tested? What parameters were varied at the input in the simulations?

Finally, the problems described in the conclusion section, related to stability and lift-off, should be better documented in the simulation results.
