Potential competing interests: No potential competing interests to declare.

The well-crafted article is written in impeccable English, providing thorough explanations and comprehensive information.

It not only elucidates various aspects but also offers detailed insights. Specifically, the article adeptly delves into the properties of radioisotopes Pu-239 and U-235, shedding light on their potential harm and the specific effects they can induce in the human body.

This knowledge holds significance for society, aiding in the comprehension of radiation effects.

I am confident that the article, after so many comments and replies from the author, is ready for publication in its present state.
