Congratulations, you have succeeded in writing this far. There are several things you can do to improve the quality of your writing.

1. In the title, it appears that this is quasi-experimental research, but in the abstract, it looks like R&D research on the LMS in question.
2. The abstract is still too long and not simple enough.
3. There are no clear research results in the abstract.
4. Until the end of the article, it is clear that the presentation presented by the author is the result of an elaboration of a literature review regarding the use of LMS in science education, which strengthens the suspicion that this article is not a quasi-experimental or R&D type.
