Dear editor

The structure of paper represent a review. The biodiversity is a priority topic in conservation management, however the additive value of paper including a new analysis and new approach. Accordingly Author(s) should be pay attention to some key comments including:

Title

Is ambiguous

Abstract

Should be revised after the main text revision

Introduction

What are the additive fitness of this study?

New analysis?

New approach?

Collection and comparison?

and etc.

The structure of manuscript including a mix of review in frame a new analysis, so more powerful introduction seems to be necessary to improve

Hypothesis

Necessity

justification

aims

to justify the importance or study or represent the vacancy of similar studies

Authors should be provide a suitable structure for material and methods including:

Study area: comprehensive description on ecology and physical geography of studied area

Methods: data collection, literature review, analysis and etc.?

Results

Authors should be classify the main titles to study area, results and discussions or conclusion

Discussion

What are the main achievements the study in frame of

biodiversity management

Environmental plans and etc.?

Finally the manuscript including valuable concepts and new analysis, regardless showing some shortcomings that must be corrected in detail.

Decision: **Major Revision**

Best Regards
