Potential competing interests: No potential competing interests to declare.

The topic discussed in this article is important in light of the fact that to address the climate crisis, it is necessary to understand why some parts of society do not recognize climate change as an emergency. The article is well-written. On one hand, the reading is smooth and fluid, and on the other hand, there are many significant bibliographic references relevant to the topic. To further improve the work, the authors could conduct statistical studies such as interviews with various segments of the population of the authors' country of origin in order to quantify the percentage of people who deny the existence of climate change and compare this percentage with populations of other countries (drawing from existing literature).
