It's an excellent and well written article, it can add a contribution to the educational fields with the state-of-the-art conversational agents and chatbots.

 Chatbots with LLM are explained in detail with a various of examples. However, it would be great if authors could mention in the literature review any previous studies which applied   LLM or other Seq2Seq models in the educational fields (schools/ colleges / universities), as well as stating the results and the performance of the models.
