Flanvotumab

National Cancer Institute

Source

National Cancer Institute. *Flanvotumab*. NCI Thesaurus. Code C91384.

A monoclonal antibody directed against the melanosomal membrane protein gp75 (or Tyrosinase-Related Protein 1 (TRP1)) with potential immunostimulatory and antineoplastic activities. Anti-gp75 monoclonal antibody IMC-20D7S targets and binds to gp75. This may lead to the induction of cytotoxic T cell immune and antibody-mediated immune responses against melanoma cells expressing gp75. gp75, a pigmentation-associated antigen, is expressed in melanosomes of human melanocytes and melanomas.
