Potential competing interests: No potential competing interests to declare.

General Comments:

- The manuscript is well-organized, with clear transitions between sections.

ABSTRACT:

- Overall, the abstract is comprehensive and well-structured, providing valuable insights into the incidence of reproductive disorders and associated risk factors in dairy cows.
- the authors have successfully addressed the research objectives using appropriate methods and a clear presentation of results.

INTRODUCTION:

The paragraph suggests the need for more recent statistical updates beyond the 2022 cutoff.

METHODS:

- Clear explanations of data management and analysis procedures, including the use of Microsoft Excel for data entry and STATA for statistical analysis, enhance the methodology's credibility.

RESULTS:

- The presentation of results is clear and organized.
- It would be helpful to include confidence intervals for the incidence risk percentages to convey the precision of the estimates.

DISCUSSION:

- Consider adding confidence intervals to incidence risk percentages.
- Clarify any potential limitations related to the study design, data collection, or generalizability.
- Discuss the practical implications of the findings for dairy farmers in more detail.

CONCLUSION:

The conclusion is well-structured and summarizes key findings.
