Without any doubt, this crisis post-mortem examination of the leadership competencies that will help in the future to tackle challenges of the dimension of COVID-19 is timely. The scoping effort is exhaustive, especially as regards assessing communication strategies related issues. My suggestion is to considering effective schemes for partnering and collaboration between government and citizens as advancements in the domains of social and cultural innovation. One of the tasks that we wish to take up is determining the levels of societal readiness and the levels of integration in society of new technologies, products, and services. COVID-19 has asked for social and cultural innovation policies that make communities ready to respond to catastrophic events on their territory—our case-study is Italy's inner areas—through access to data, communities of practice, co-creation, reflection, and inclusion.
