Review of: "The Relationship Between AI Tools and Their Aspects in Higher Education"

Adilah Afikah[1]

1 Universitas Negeri Yogyakarta

This research is very relevant to current needs. Here are some comments I can make to make this article even better:

Introduction. It should be added to the introduction why this research focuses on the use of AI in higher education. The title describes AI and its aspects, but there is no explanation of these aspects, and the explanation of AI is still limited and not in depth.

Method. There is no explanation of whether the research instruments used are self-developed or adapted from previously developed research. Please add this to the article regarding the measurement instrument. Also, how was the sample determined in this study to obtain 350 teachers who teach in universities?

Results. It is better to present a table to make it easier for readers to understand the research results. Also, there is no discussion section to explain the research results.

The content of the conclusion section is not correct; there are still sentences that should be written in the introduction and results or discussion, but are written in this section.

References. Should be added.

Good luck!
