# Mental Retardation, Autosomal Dominant 9

National Cancer Institute

## Source

National Cancer Institute. *Mental Retardation, Autosomal Dominant 9*. NCI Thesaurus. Code C133742.

An autosomal dominant condition caused by mutation(s) in the KIF1A gene, encoding kinesin-like protein KIF1A. It is characterized by microcephaly, intellectual disability, and delayed psychomotor development. The condition is progressive, occurs in early infancy, and is of variable severity.
