It is a useful article. There are some concerns that need to be addressed.

1. The paper mentioned that levothyroxine is not recommended for patients with normal T3/T4 and TSH below 10mIU/L. Do all patients including TPO positive, hyperlipidemia and so on with TSH below 10mIU/L not need levothyroxine therapy?
2. There are several spelling errors that need to be corrected. For example, the *full name* of SCH should be subclinical hypothyroidism.
