

# Review of: "Adoption of Technology Acceptance and Interfaces for Academic Information System Applications"

Adelaida D. Ojeda<sup>1</sup>

<sup>1</sup> Universidad del Atlántico

**Potential competing interests:** No potential competing interests to declare.

**Clarity in Variable Definitions:** Although variables like PEOU, PU, and UI are mentioned, it would be beneficial to provide clear and operational definitions of these variables in the methods section to ensure consistent understanding among readers.

**Expansion of Context:** It would be helpful to expand the introduction section to include a more detailed analysis of the specific context in which the study was conducted, such as the academic environment, student characteristics, and existing information systems in the institution.

**Consideration of Additional Variables:** While the study focuses on PU, PEOU, and UI, it could be valuable to explore the influence of other relevant variables such as prior experience with similar technology, availability of support resources, and organizational culture.

**Complementary Qualitative Analysis:** In addition to the quantitative approach used in the study, incorporating qualitative methods such as interviews or focus groups could provide deeper insights into users' perceptions and experiences with academic information systems.

**Detailed Practical Implications:** While implications for practice are discussed in the conclusion section, it would be useful to provide more specific and practical recommendations for academic information system designers and decision-makers in educational institutions.

Based on the analysis, there appears to be congruence between the elements of the article:

- The research objectives stated in the introduction align with the hypotheses tested and the variables analyzed.
- The results presented in the findings section are consistent with the research questions and hypotheses proposed.
- The discussion interprets the results in relation to the theoretical framework and previous literature, supporting the conclusions drawn.
- The conclusions draw upon the results and implications discussed throughout the article, providing a logical summary of the study's findings.

In conclusion, the article demonstrates congruence between its objectives, results, and conclusions, indicating a well-structured and coherent research study.
