Potential competing interests: The author(s) declared that no potential competing interests exist.

I have looked through all of the manuscript. And I feel the study carried out by authors is interested, and the results are meaningful. However, there should exist some places needed to be improved.

1. The authors conducted the expemeriments in multi environments, however, symbols abbreviated for the individual enviroments were not clear, even ambiguous when the combinations for different location with years.
2. Among the correlation analysis (Page 7, Figures 1 and 2), there still existed similar blurrs which can not be expressed clearly, such as OSL_G12, A1 through A22, etc.
3. Therefore, I think the authors should describe the abbreviations clearly, and then I review it again.
