

Review of: "Some Results on Maxima and Minima of Real Functions of Vector Variables: A New Perspective"

Murugesan Meganathan

Potential competing interests: No potential competing interests to declare.

It is a well-written and well-organized paper on an interesting theme.

Here are some suggestions for improvement:

1. The abstract is too lengthy; make it short and objective. The purpose should be clear.
2. In the introduction, the authors should add more citations, including references to the recent development of maxima and minima.
3. In all the equations, check for typo errors like full stops, commas, etc.
