# Subiculum

National Cancer Institute

## Source

National Cancer Institute. *Subiculum*. NCI Thesaurus. Code C33648.

A complex of structures, including the prosubiculum, presubiculum, postsubiculum and parasubiculum, and the subiculum proper, that is located between the entorhinal cortex and the CA1 subfield of the hippocampus proper, forming the most inferior portion of the hippocampal formation. The structure complex has a variety of functions, including working memory, spatial relations, and regulation of the hypothalamic-pituitary-adrenal axis.
