

Review of: "[Viewpoint] Vaccination campaigns against Covid-19 may promote vaccine hesitancy toward mostly well-established, safe, and effective vaccines"

Abhijit Mohanty

Potential competing interests: No potential competing interests to declare.

The topic is quite interesting and may open new avenues for empirical research in future. The authors have successfully presented the topic in a scholarly manner. I would recommend to add Full forms for the abbreviations used in the paper e.x. RCTs, BJM, MHRA, FDA, EMA for betterment of the readers across the globe. Further, I would be more comprehensive and supportive if the authors can provide a few graphs or charts in the support of the statistical values mentioned in the text (if applicable).
