Potential competing interests: No potential competing interests to declare.

Exciting and really relevant information! This detailed piece brings up some intriguing points. An online education and artificial intelligence (AI) conversation ensues. Although the introduction covers what appears to be a literature review, the methodology and the selection criteria for the publications listed are not made apparent. also, sources. Finally, some consideration of how to advance the state of the art or the body of knowledge in the subject would be appreciated. What steps does the author suggest the academic community take to fill in the gaps in our understanding, and where do we now stand? Where do these research stop, and what do they not investigate? Otherwise, it's a fascinating read.
