Potential competing interests: No potential competing interests to declare.

The objectives of the study are not clear.

In table 1 the information should be better organized, put the data in the table in such a way that the comparisons between the characteristics (groups) of the population, gender, age, place of residence are shown (after carrying out tests to see if Is the population homogeneous or heterogeneous and based on these results, organize its characteristics).

How is the instrument (questionnaire) validated?

How was the population recruited? What are the inclusion and exclusion criteria?

Without this information it is not possible to assess the validity of your results.
