Potential competing interests: No potential competing interests to declare.

Title:

If it is possible to change the title to (Strategies for Sustainable Management of Information and Communication Technology Resources in Modern Organizations)

The abstract:

While the abstract is generally well-structured and informative, there are a few potential weaknesses:

The abstract provides a broad overview of the study's topics, but it could benefit from more specific details. For instance, it mentions the "effects on effectiveness and productivity and cost optimization."

The abstract repeats the importance of ICT resource management's continuous nature and the need for businesses to align with emerging technology and customer demands. Some of this information could be consolidated to make the abstract more concise.

Introduction:

Kindly, If it's feasible to divide the introduction into distinct sections, such as challenge, novelty, contribution, and paper organization, it would enhance clarity.

And provide some diagrams or flowcharts

Please provide a clear outline of the key sections in the paper, including the Introduction, Literature Review, Related Works, and Methodology."

Introduction:

Here is the first references, While when you go to first references it not same, as following :

The term "ICT resources" refers to the many technology components and devices used in businesses to manage, process, store, and transmit data (Chege et al., 2020; Murgor, 2015). These resources consist of both software and hardware, such as servers, computers, and networking equipment, as well as network infrastructure and data storage systems. ICT

resources are essential to the operation of contemporary firms and are vital in facilitating communication, decisionmaking, and organisational procedures (Bahrini & Qaffas, 2019). To fully utilise technology and accomplish their objectives, organisations must manage ICT resources effectively. Businesses can benefit from higher productivity, simplified processes, improved communication, enhanced data security, and competitive advantages when ICT resources are managed effectively (Lee et al., 2015; Maes, Standaert, & De Backer, 2015)

The Related Works:

Kindly, If it's feasible to provide some diagrams or flowcharts in Related Works.

The conclusion and recommendations:

There are a few potential weaknesses or areas for improvement to consider in your conclusion and recommendations:

Consider using bullet points or shorter paragraphs to enhance readability.

If you give real-world examples can help readers better understand the practical implications of effective ICT resource management.

Instead of general principles, consider offering concrete suggestions or strategies that organizations can follow.

If your study is based on existing research or references, it's a good practice to cite specific sources or studies that support the points made in the conclusion. This adds credibility and allows readers to explore the research further.

If you discussion of future trends in ICT resource management in how organizations can mitigate those risks would will be more beneficial.
