This is an interesting discussion of a regulation introduced in 2022. As I am outside Indonesia, I had not heard of this. It seems to be very comprehensive in the types of projects that it covers. It will be interesting to follow the progress of these projects in practice. Can you tell us if any projects have commenced? Does the author think that some project types should have more priority than others? Will the projects be spread across the whole archipelago of Indonesia? Are there any targeted regions where the need is greatest? I look forward to hearing the authors' reports on the way this Presidential initiative develops.
