Yersinia bercovieri

National Cancer Institute

Source

National Cancer Institute. *Yersinia bercovieri*. NCI Thesaurus. Code C86854.

A species of facultatively anaerobic, Gram negative, rod shaped bacteria in the phylum Proteobacteria. This species is motile, positive for urease, ornithine decarboxylase, and pyrazinamidase and negative for indole, beta galactosidase, citrate, and oxidase. It is able to ferment sucrose, fucose, cellobiose, and xylose but not rhamnose, melibiose, or sorbose. *Y. bercovieri* is found in many environments and is not a known pathogen.
