Review of: "A Review of Design Concerns in Superconducting Quantum Circuits"

Zhao Yan-Jun¹

1. Beijing University of Technology, Beijing, China

The paper has done a comprehensive review of the basic knowledge and workflow about superconducting qubit design. It is absolutely well-written and has done a great job that will benefit the research of the general audience in superconducting qubits. I totally agree with its publication on Qeios. I would appreciate it very much if the authors could address the following points.
